

Counting 100 SMARTShip™ deployment and more

Alpha Ori Technologies (AOT), the leading provider of maritime digital solutions, announced that they now have 100 ships on their SMARTShip™ platform. This achievement underscores SMARTShip's key role in maritime digital revolution through the latest technologies such as industrial IoT, Cloud, Big Data and Machine Learning applications.

AOT has doubled the number of ships deployed with the SMARTShip platform and reached a milestone of 100 in just under a span of 6 months. There is a wide recognition of the SMARTShip platform and its benefits to ship owners and operators in the industry.

Speaking on the occasion Capt. Rajesh Unni the Co- CEO said, *“Four years ago, a few of us embarked on a journey with a vision to transform the shipping industry and use technology to solve real world problems. Since then, it has been a steep learning curve but we are proud to have launched a successful product that has seen rapid adoption in the market”.*

AOT engineers are deploying SMARTShip globally, and have established local teams in Singapore, China, South Korea, Dubai, Japan, Europe and India to meet greater demand. Existing customers are reaping benefits alongside cost savings and have shown confidence in the product by ordering additional ships. AOT also announced a large pipeline of ships and expects to triple the number of ships on the SMARTShip platform in 2021.

“We are excited to have SMARTShip installed on some of our MOL Chemical Tanker fleet. Leveraging on SMARTShip's capabilities we are looking forward to transforming the way we operate ships by having real time access to data, analytics and insights, and making data driven decisions”.

-Hirofumi Nara, Executive Officer , MOL Chemical Tankers Pte. Ltd
